

Research Topics at the University of Corsica

Jean-François Santucci¹

¹ University of Corsica, Corte, France

The goal of this presentation is to give an overview of the research conducted at the University of Corsica. The emphasis will be put on generic modelling and simulation formalisms and tools and it will be pointed out how they are used in the framework of the six research projects which have been chosen in order to efficiently structure the research at the University of Corsica : (i) Forest fires ; (ii) Water management and valorisation in the Mediterranean area ; (iii) Renewable energies ; (iv) Natural resources ; (v) Identities and Cultures ; (vi) Territories dynamics and sustainable development.
